

Turn your HOME
into a SMART
Home

Working in Partnership with your Developer

Lighting Control

How would you like to be able to control all of your lights from one switch point?

With lighting control we are able to group lights together to create lighting scenes in desired areas of the home and create the right ambience for your needs. Having the ability to control all your lights from one place allows you to manage and monitor your energy usage and ensure lights are only turned on where they are needed, and at the right levels using dimming control.

Heating Control

Be Energy Smart with clear and concise heating controls. VITREA light switches contain thermostats, which can be controlled from your phone remotely ensuring you are only heating your home when you need to.

Further compliment the design of your home with standard or flush mounted glass touch keypads. Choose from a stylish standard colour or made to order colour matched glass, with engraved text or icons.

Home Entertainment

Many of us enjoy watching TV and listening to music, we can help integrate Audio and Visual technology into your home to create the perfect Movie room for those special family film nights and achieve high quality surround sound and multi-room audio solutions!

To keep your home clutter free, we can create a hub within your home to house entertainment equipment and media boxes.

Internet Distribution

Much of the content we watch on our tablets, phones and televisions comes through the internet, and with multiple users wanting to connect simultaneously; having a strong cabled structure and seamless Wi-Fi throughout the home is hugely important.

With more of us working from home and with the ability to watch our favourite programs On Demand, the internet has become essential to our daily lives.

Home Security

We believe prevention is better than the cure. Would you like a pro-active security system that works in conjunction with your CCTV and lighting systems to protect you and your property?

It is becoming more common for CCTV to be integrated into the security system as opposed to a standalone intruder alarm. CCTV cameras provide extra security and peace of mind and act as a deterrent for criminal activity.

Keep an eye on your property from anywhere in the world!

Whole SMART Home Operating System

On average we use 15 different Apps to control our homes. Make life easier by having everything connected on ONE Operating System, with easy to operate touchpads and App control from personal SMART devices such as phones or tablets.
